The novel protein has a more potent anticoagulation activity than protein. C and is expected to have competitive inhibitory activity against menadione dependent blood coagulation proteins. It also has neutralization activity against plasminogen activation inhibitor, and inactivates Factor-Va or Factor-VIIIA. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Hybrid protein of protein C with replaced Gla domain - using human vitamin=K dependent proteins, e.g. factor X, to give improved anticoagulation activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 461 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                processing at an ionic strength greater than 150 mM and a pH of 5.5-6.3. The present sequence represents the primary structure of activated human protein C, used to assist in illustrating the autodegradation pathways described in the present invention. The apc is used for treating a variety of acquired disease states involving intravascular coagulation e.g. thrombotic stroke, deep vein thrombosis, pulmonary embolism, peripheral arteries, acute myocardial infarction, disseminated intravascular coagulation and acute pre- or postcapillary occlusions including transplantations or retina thrombosis. The process minimises the process minimises the process minimises.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 419 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the percentage of autodegradation products forming at most 10%, preferably below 5% of des(1-9) aPC and des(1-10) aPC by weight, to achieve a more potent, higher purity aPC pharmaceutical preparation

A plasmid contg. this construct was transfected into BHK cells which were then cultured to produce PAP-I-protein C fusions which were activated to a form fully active in both amidolytic and anticoggulant assays. The nucleic acids, and primers and probes, are used to identify polymorphisms, which may predispose an individual to disease, especially a vascular disease. They can also be used in phenotype correlations, forensics, paternity testing, medicine or genetic analysis.

AAY49550 to AAY49573 represent the proteins which correspond to some of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAR12196;
                                                                                                                                                                                                                                      The mutant has a prolonged half-life in blood compared with natural activated human protein C. Alternative positions for substns. are Asp(20), Lys(22), Lys(23), Lys(24), Asp(45), Lys(48), Lys(490), Asp(182), Asp(183), Asp(185) and Trp(211). The amino acid is replaced with an oppositely charged residue. The active site amino acids, His(42), Asp(88), and Ser(191) must be present. See also AAR11838 and AAR12192-R12195. (Updated on 25-MAR-2003 to correct PA field.)

Alternative positions for substns. are Asp(20), Lys(22), Lys(23), Lys(24), Asp(45), Lys(49), Lys(49), and Asp(185), Trp(211) and Glu(213). The amino acid is replaced with an oppositely charged residue. The active site amino acids, His(42), Asp(88), and Ser(191) must be present. See also ARR11838 and ARR12192-R12196. (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disulfide-bond
                                                                                                                                                                                                             The mutant has a prolonged half-life in blood compared with natural activated human protein C. Alternative positions for substrms. are Asp(20), Lys(22), Lys(23), Lys(34), Lys(49), Asp(182) and Arg(183), Asp(185), Trp(211) and Glu(213). The amino acid is replaced with an oppositely charged residue. The active site amino acids, His(42), Asp(88), and Ser(191) must be present. See also AAR12192-R12196. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                Activated human protein C deriv. and DNA encoding it - has prolonged blood half life for use as an anticoagulant.
                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 1991-136309/19

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
